

2026 Job Market (Data Role)

→ freelance market will be of two

↳ AI tools (Necessity)

Data Science → It's not about algorithms but it is also about decision-making at scale.

Core applications of Data Science

① Product & Tech companies

↳ Amazon, Netflix, Youtube

Application

① User churn prediction

- ② Recommendation system
- ③ search ranking
- ④ sentiment analysis from reviews, comment

② finance & fin-tech

90% of tasks are done by ML models.

Applications

→ transactions

- ↳ Logistic Regression
- ↳ Linear Regression
- ↳ Random forest
- ↳ Xgboost
- ↳ Clustering algorithms

① fraud detection

② Loan Approval

③ stock Price Analysis

③ Healthcare domain → Accuracy is secondary

↳ Mandatory
Explainability &

Applications

trust comes first

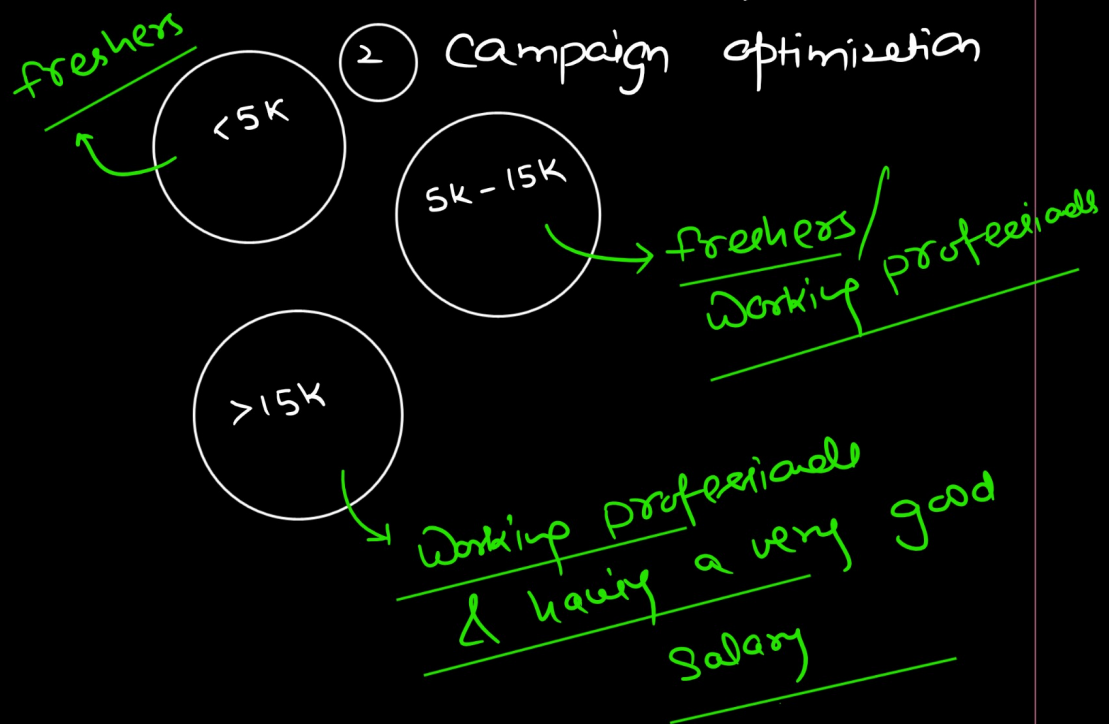

- ↳ ① Disease risk prediction
- ② Medical Imaging
- ③ Patient readmission analysis

Model explainability refers to the concept of being able to understand the machine learning model. For example – If a healthcare model is predicting whether a patient is suffering from a particular disease or not. The medical practitioners need to know what parameters the model is taking into account or if the model contains any bias. So, it is necessary that once the model is deployed in the real world. Then, the model developers can explain the model.

4 Marketing & Growth

Applications

- 1 Customer segmentation
- 2 Campaign optimization

5 Operative & supply chain

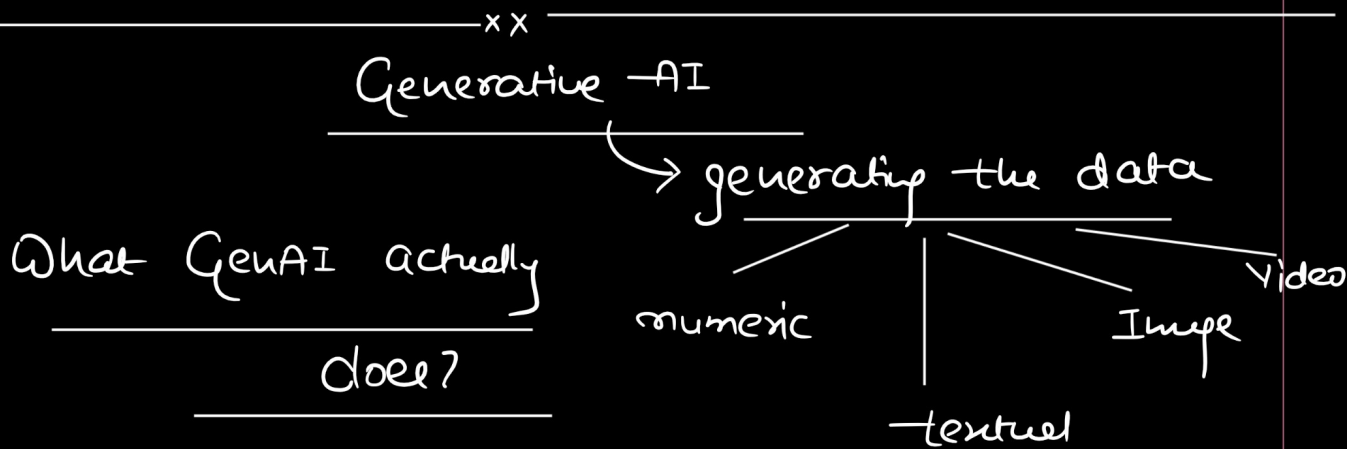

Applications

- 1 Inventory optimization
- 2 Demand forecasting

for example

↳ E-commerce company see a sudden
drop in repeat users?

- ① What data will you collect?
- ② What metric matters the most?
↳ Accuracy, precision, recall or any other metric?
- ③ What decision should come out of
the trained model?

- ↳ text generation (chatGPT, Gemini, Claude)
- ↳ Code assistance (Copilot)
- ↳ Documentation
- ↳ Data summarization

GenAI is a copilot, not a pilot.

Agentic AI → System that can
plan, decide, act &
iterate

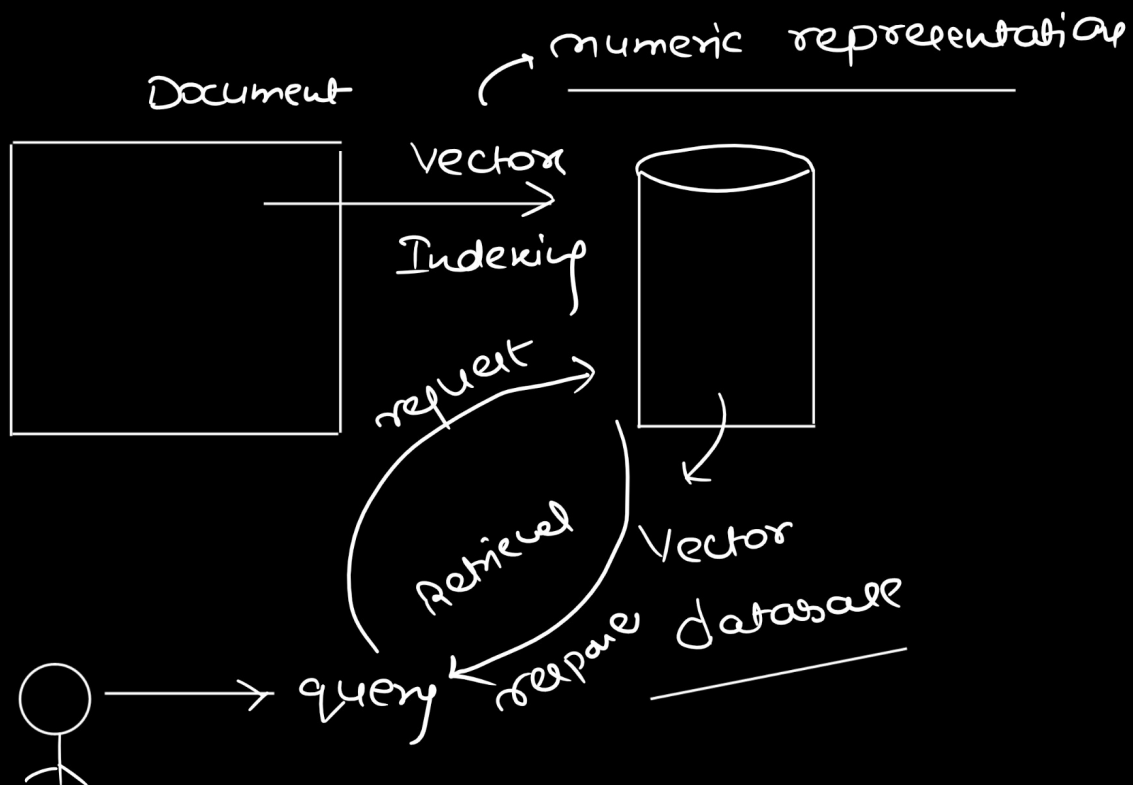

↳ Learn from the feedback

↳ Vector store (Pinecone)

RAG → Confidential Data

↳ Indexing (Knowledge Warehouse)

↳ Retrieval

What to focus on in 2026

- ① Business problem
- ② EDA (Data cleaning)
 - ↳ strong statistics & experimentation
- ③ Python + SQL
- ④ GenAI is a must skill
- ⑤ Understanding of agentic ai workflows
- ⑥ Freelancing economy will boom in 2026
- ⑦ Remote work/hybrid work will continue
- ⑧ Continuous learning will become necessity

⑨ Portfolio became more important
↙ then degree.

LinkedIn, Twitter, Medium

⑩ Very good storytelling &
Communication
skills
